

Automated Network Request Management in ServiceNow

Project Documentation Format

1. Introduction

- **Project Title:** Automated Network Request Management in ServiceNow
- **Team Members:** RACHANA CHALLA (Project Owner & Developer)

2. Project Overview

- **Purpose:** To automate and streamline network-related service requests such as VPN access, IP allocation, firewall changes, and router configuration using ServiceNow.
- **Features:** Request submission, approval workflows, automated provisioning, status tracking, and notifications.

3. Architecture

- **Frontend:** Service Portal (Now Experience)
- **Backend:** ServiceNow Platform (Flow Designer, Business Rules, Script Includes)
- **Database:** ServiceNow Tables (Request Items, Catalog Items, Users, Workflows, etc.)

4. Setup Instructions

- **Prerequisites:** ServiceNow Instance (Personal Developer Instance)
- **Installation:** Import update sets (if any), create required tables, catalog items, workflows and roles.
- **Configuration:** Set up service catalog, flows, approvals, notifications and user roles.

5. Folder Structure (in ServiceNow)

- **Application Scope:** x_racha_network_request
- **Modules:** Catalog Items, Flows, UI Policies, Client Scripts, Notifications, Reports, etc.
- **Update Sets:** Used for moving customizations between instances.

6. Running the Application

- Access the Service Portal → Network Requests.
- Submit a request and track the status.
- Admins can manage requests, approvals, and configurations from the back-end.

7. Functional Documentation

- **Catalog Items:** VPN Access, IP Allocation, Firewall Change, Router Configuration, Others.
- **Workflows:** Request → Approval → Provisioning → Closure.
- **Notifications:** Email/SMS alerts at each stage.

8. Authentication

- Uses ServiceNow built-in authentication.
- Role-based access control (Requester, Approver, Network Admin, etc.).
- Session-based login via Service Portal.

9. User Interface

- Service Portal pages for submitting requests, tracking status, and approvals.

- Responsive UI for desktop and mobile users.

10. Testing

- **Functional Testing:** All catalog items, workflows, and approvals tested.
- **User Acceptance Testing (UAT):** Performed with test users.
- **Performance Testing:** Validated for multiple concurrent requests.

11. Screenshots or Demo

- Screenshots of major modules, request submission, approval process, and reports.
- **Demo Link:** (Provide your project demo link here)

12. Known Issues

- None major. Minor UI alignment issues in mobile view (under observation).

13. Future Enhancements

- Integration with monitoring tools.
- Auto-provisioning using MID Server.
- AI based request categorization and chat support.
- Dashboard with real-time analytics.
