

Project Design Phase-II

Data Flow Diagram & User Stories

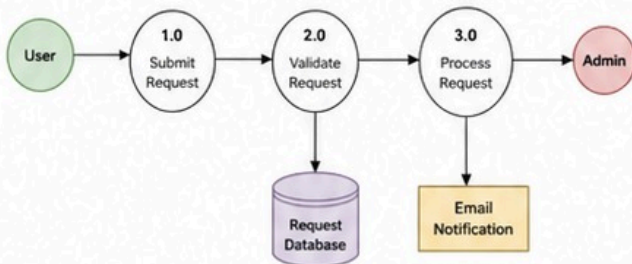

Date	27 June 2026
Team ID	RACHANA-TEAM
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

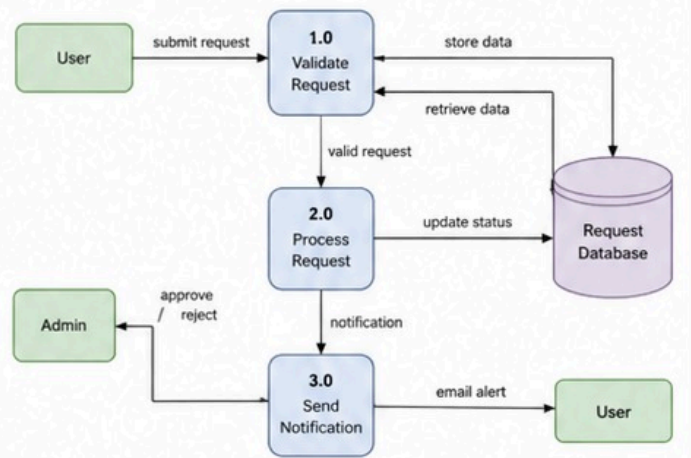

Example: [Simplified](#)

Flow

1. User submits a request.
2. System validates the request.
3. System processes the request.
4. Request is stored in the database.
5. Admin receives notification.

Example: DFD Level 0 (Industry Standard)

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Customer (End User)	Submit Network Request	USN-1	As a user, I can submit a network request by providing required details.	Request is submitted successfully and I get a confirmation.	High	Sprint-1
	Track Request Status	USN-2	As a user, I can track the status of my network request.	I can view real-time status of the request.	High	Sprint-1
	Receive Notifications	USN-3	As a user, I can receive email notifications for request updates.	I receive email for request creation, update and resolution.	Medium	Sprint-1
Admin (Approver)	Review & Approve Request	USN-4	As an admin, I can review and approve or reject network requests.	I can approve or reject the request with comments.	High	Sprint-1
	Update Request Status	USN-5	As an admin, I can update the status of the request.	Status is updated and visible to the user.	Medium	Sprint-1
	Manage Requests	USN-6	As an admin, I can view and manage all network requests.	I can filter, search and export request details.	Medium	Sprint-2
System	Validate Request Data	USN-7	As a system, I should validate mandatory fields before submission.	Request is not submitted with missing mandatory data.	High	Sprint-1
	Store Request Data	USN-8	As a system, I should store all request details securely.	Request data is stored in the database.	High	Sprint-1
