

Automated Network Request Management in ServiceNow

End-to-end journey of a network request from raising to closure

User Personas

	Discover / Need User identifies the need for network access/service	Request User raises the request in ServiceNow	Review & Approve Request is reviewed and approved	Fulfill Network team implements the request	Verify / Test Validate and confirm the implementation	Close Request is closed and user is notified						
Steps What does the user do at this stage?	Recognizes need for network service/access	Login to ServiceNow portal	Select "Network Request" catalog item	Fill the request form and submit	Manager reviews the request	IT approvals are completed	Network engineer picks up the task	Implements configuration in network devices	Engineer tests the connectivity and access	User confirms the request is working	Request is marked as resolved	User receives closure notification
Motivation What is the user trying to achieve? - What is their goal? - What are they trying to avoid? - What is the expected outcome?	Get network access for work faster	Do not want delays	Submit request quickly and easily	Provide correct details to avoid rejection	Ensure request is valid and compliant	Approve within SLA	Implement accurate configuration	Complete task within SLA	Ensure network is working as expected	Avoid service impact	Close the request successfully	Ensure user satisfaction
Pain Points What challenges or difficulties do they face?	Not sure whom to contact	Unclear process	Form is lengthy or confusing	Missing information causes delay	Not all expected approvals taken	Multiple approvals take information	Device access issues	Manual tasks are time consuming	User not available for verification	Intermittent connectivity issues	Delay in closing the request	No feedback collection
Positive Aspects What is working well? What does the user like?	Self-service portal is available	Easy to find the catalog item	Form with clear options	Instant request confirmation	Notifications at each stage	Approval workflow is organized	Standardized procedure	Task assignments are clear	Testing checklist available	Quick validation	Automatic closure notification	History is recorded
Negative Aspects What is not working well? What frustrates the user?	Lack of awareness about portal	Hard to choose correct options	Attachments are not clear	Request submission fails	Approval pending for long time	No visibility on who is pending	Waiting for device access	Manual updates cause errors	Rework if configuration fails	Inconsistent test results	No option for feedback	Request status not updated in time
Areas of Opportunity What can improve the experience?	Awareness and training sessions	Simplify the form	Auto-fill user details	Guidance and help text	Set SLA based approvals	Parallel approvals	Automation for configurations	Integration with network devices	Automated testing tools	User self-verification option	Auto closure reminders	Collect user feedback
